

# epitomesoftware

Unless you are a massive enterprise with equally large budgets, there is every chance IT doesn't really provide what you need to effectively run your business.

So it's unlikely your software helps:

- Capture actual labour costs as they occur.
- Quickly, fully and accurately track expected or known cost variations.
- Re-cost and re-price projects when the charges for inputs rise.
- Simply access details of past projects.
- Manage JIT and other lead times.
- Automate the production of purchase orders.
- Drive multiple BOM reporting.
- Manage and control sub-contractor work.

If that's the case, you may like to know that computing has just changed. Dramatically. And certainly for the better.

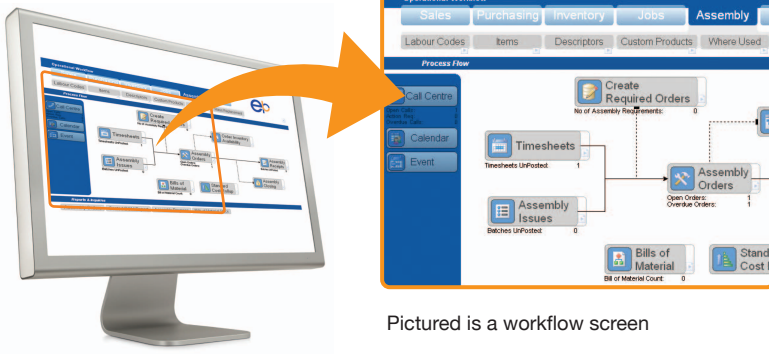

A fact that's been brought about by the development of the comprehensive, but very simple to use, manufacturing industry software solution provided by Epitome Software.

Epitome provide a solution that's been specifically designed, from the ground up, to meet all of your needs, demands and challenges. It's all about the specifics of your business. It's uncompromising in the range of facilities delivered. And, most importantly, it's affordable.

When manufacturing...

The trouble with computer systems is that they are either expensive or they just don't seem to cater for what you do and how you want to do it.

Pictured is a workflow screen

Among the potent facilities the system delivers are:

- The ability to apply labour, inventory and overhead charges to set up operations.
- To do exactly the same for run-time operations.
- Fully assign the consumption of materials during set up.
- Automatically apply overhead costs when there are variations to standard batch sizes.
- The capacity to hold limitless routing steps, along with complete operational notes by production line or step.
- The simplicity in costing co-products and by-products.
- The power to automatically capture actual costs and variations.
- The delivery of advanced management report at your fingertips.
- Highly flexible reports that enable you rapidly get the information you need, exactly when you need it.
- A capacity to provide multi-level BOM reporting, with virtually unlimited levels.
- The ease with which JIT and other inventory management can be substantially simplified.
- To pivotally help control warehouses where the high speed processing of orders is essential.
- Those capabilities that enable warehouse managers to easily track the progress of picking, packing, labelling and despatch of orders, whilst providing designated logistics staff access to the status of each and every current order.
- To present the critical data needed to effectively manage sub-contractors.

Plus and most importantly:

Simple integration with **MYOB** or **QuickBooks** so you can enjoy all the benefits of the new software without having to change your current accounting and payroll system.

## We're also known for the companies we keep

"In becoming au fait with what we were about to go live with, it was good to find that the Ostendo software is extremely easy to learn and understand."

"A fact which carries through to the present. And which means that when new staff come on board, they can pick up all they need to know very quickly. That gives us considerable comfort."

"But, of course, one of our principal driving concerns, in acquiring the new application, was one of support."

"What Epitome delivers here is very, very good. They have a solid team and it is always available when we need them."

"So the fear of our essential manufacturing system being off the air has effectively disappeared."

Mr Redman goes on to stress the ease and simplicity with which Ostendo and MYOB interface.

As he says, "We typically pass relevant manufacturing data to the accounting system once a day. A process which only takes about 10 minutes and is achieved with little more than hitting a computer key or two."

Mr Steve Redman, Sales QA & OHS Manager, Zezt Pty Ltd

"From a cost perspective, this looked very attractive. So it was then good to find out it could give us exactly what we needed. The decision to adopt Ostendo was thus a pretty straightforward one."

"Happily, there were absolutely no traumas or issues. Our implementation was smooth. Integration with MYOB was simple. We got the system operational within a month. And all with good Epitome on-site training and instruction manuals. The experience was, in a word, 'easy'."

"It's also relevant to note that anyone, with even the most basic computer experience, can start using the Ostendo applications very quickly. It is a very friendly system. And when you need to get things happening quickly, that's a real plus."

Ms Maureen Lawlor, Sales and Marketing Manager, DMF Pty Ltd

... And more clients comment;

"The new software has made the show run faster and more efficiently."

Ms Debbie Reed, Director, Resource Furniture.

"We have had very good experiences with the software, but with an economically sensible budget."

Mr John Goasdoue, CEO, Desitrol.

"The system looked – and has proved to be – very user friendly; very easy to learn and use."

Mr. Michael Johns, Aquacorp Pty Ltd

"We now know exactly where we are making money, where we are not and where we should be making more"

Mr Arthur Calcatjicos, Managing Director, Shining Knight Cleaning

"It has put us in a much better position and has enabled us to sustain our continued growth."

Mr David Hart, Dematec Automation Pty Ltd.
