Where food industry IT just got smart.

Whether you're a grower, a merchant, a distributor or a manufacturer...

The trouble with computer systems is that they just don't seem to cater for the food industry.

Unless you are a massive enterprise with equally large budgets, then there is every chance that IT doesn't really give you very much at all to help effectively run your food industry business.

So you may well be more than frustrated that computer systems can't help:

- Streamline the endless sales price adjustments you need to make – day after day.
- Enhance order taking that remains a slow, arduous and error prone task.
- Speed order picking and despatch.
- Make delivery rounds more productive.
- Provide accurate inventory management.
- Get purchasing and inventory to match manufacturing needs.
- Assist with the control of use by dates.
- Improve product costing challenges.
- Schedule and still avoid late deliveries.
- Reduce the all too long hours you have to work.

If that's the case, you may like to know that computing has just changed. Dramatically. And certainly for the better.

A fact that's been brought about by the development of the comprehensive, but very simple to use food industry software solution, supplied and supported by Epitome.

It's a solution that's been specifically designed to meet all of your needs, demands and challenges. It's all about the specifics of your business. And it's uncompromising on the range of facilities delivered.

Facilities that include:

- **Fast Order Entry** Eliminating the delays, complexities and possible errors inherent in current order processing.
- **Customer Order Pad** Speeding order taking by presenting a sub set of your total product range that is individual customer specific.
- **Standing Orders** Far more simply handling customers' regular orders.
- **Multiple Product Unit Measures** Making it a straightforward task to handle units, inners, outers and pallets.
- **Negotiated Pricing** Streamlining the effort needed to work with numerous different price lists.
- **Quantity Breaks** Automatically recognising varying unit prices based on total volumes ordered.
- **Batch Tracking** Guaranteeing product recalls can be made rapidly and efficiently.
- **Levies** Automatically catering for government taxes and other imposts.
- **Pick & Pack** Ensuring orders are despatched quickly and accurately.
- **Shelf Life Dates** Bringing maximum control to use by date management and control.
- **Driver's Run Sheets** Offering total efficiency on the road.
- **Van Delivery Rounds** Substantially enhancing delivery productivity.
- **Bar Codes** Comprehensively using barcoding to speed operations, reduce errors and enhance productivity. And allowing the use of multiple barcodes per stock line.
- **Advanced Reporting** Highly flexible reporting that allows you to rapidly get the information you want, when you need it, to run your business exactly how you need to.
- **Time Sheets** Track real cost of production.
- **Just in Time** Production control.

Plus and most importantly:

Simple integration with **MYOB** or **QuickBooks** so you can enjoy all the benefits of the new software without having to change your current accounting and payroll system.
