

Job Costing

The Job Costing module in Ostendo is used to service many other facets of the system and provides the substantial functionality required by organisations that are not simply selling a product or reproducing the same product range repetitively.

Within Ostendo, you can build up a plan (or just issue the actuals) using inventory, charge lines, formal labour (with actuals from timesheets) and with all of the order entry options, like supplier catalogues.

Quickly create fully populated jobs from templates and analyse planned and actual costs in summary or detail.

With purchase orders simply enter costs and suppliers to automatically create, change markups by differing categories. View actual issues, group lines together, mark lines or tasks as complete and/or drill down to get all specifics relating to the job.

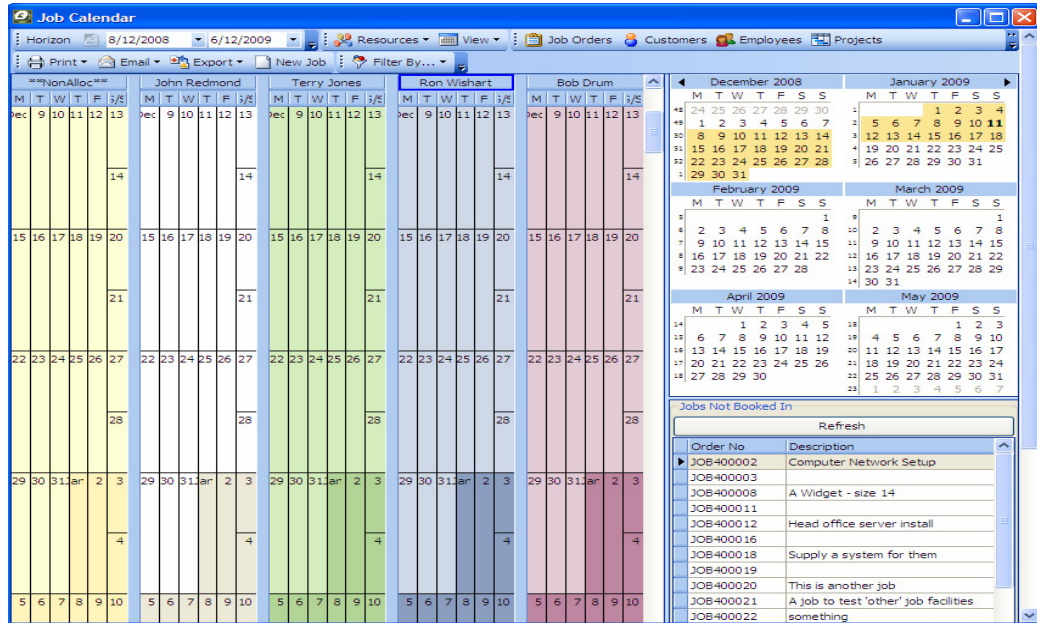

To assist with control Ostendo also has a Job Calendar interface providing a range of capabilities to clearly view your organisation's resources.

**Fact Sheets are available for a variety of industries & uses:
 Manufacturing, Distribution, Point of Sale, Job Costing,
 Complex Projects, Pricing, Suppliers & Equipment Servicing.
 These can be downloaded from: www.epitome.com.au**

This job calendar allows visual scheduling of all company's resources, assets and employees. Jobs can be created in the calendar on the fly, booked in from the job itself or simply dragged into place from the list of jobs waiting scheduling.

Resources can have their schedules for a given task split (complete it tomorrow or come back next week) or moved together with other resources scheduled for a common task.

The calendar can be viewed by day, week, month or timeline. Select the resources to view by job, task, type, customer, period and many other options.

For extra functionality the calendar schedule will integrate with Microsoft Outlook to show each task by status of assigned, notified, accepted, declined or finished according to the resource's response.

Double clicking on a task allows you to drill down for more detail, while the simplicity of drag and drop functionality provides a quick method to reschedule any job or task as needs change. If integrated with Outlook, auto notifications will be raised to inform all involved of any change to schedules.

Fact Sheets are available for a variety of industries & uses.
