

Inventory Replenishment

Don't order too much. Don't leave ordering too late. The conflicting requirements of stock control provide a lot of opportunities for expensive mistakes – too much stock or unhappy customers.

Replenishment needs to be simple to run, easily set up and must have extensive visibility so you can have the confidence that the orders being placed are right.

Ostendo provides the ability to run replenishment for suggestions and then have the operator approve the suggestions or not, automatically converting (edited) suggestions to orders as needed.
